## Beauty of

# Laminate

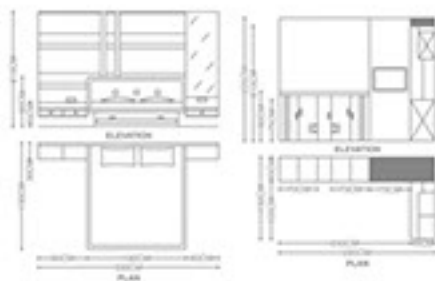

Laminate is an extremely tough and strong material with a long lifetime.

Laminate requires minimal maintenance and is easy to clean, a material that looks good, year after year and protects expensive furniture in tropical weather conditions. Laminate, when used on the outer and inner surfaces of the furniture saves the furniture from the daily wear & tear, thus making it look younger for years to come. Inside of the drawers, shelves, cabinets, inner wardrobe doors feel good and user-friendly when laminated. This also eliminates the need of frequent polishing which is cumbersome and time consuming. Similarly furniture that is laminated at the back resists moisture and dampness existing in the concrete wall when rested against it and is saved from decaying.
